

1. UI/UX Inconsistencies

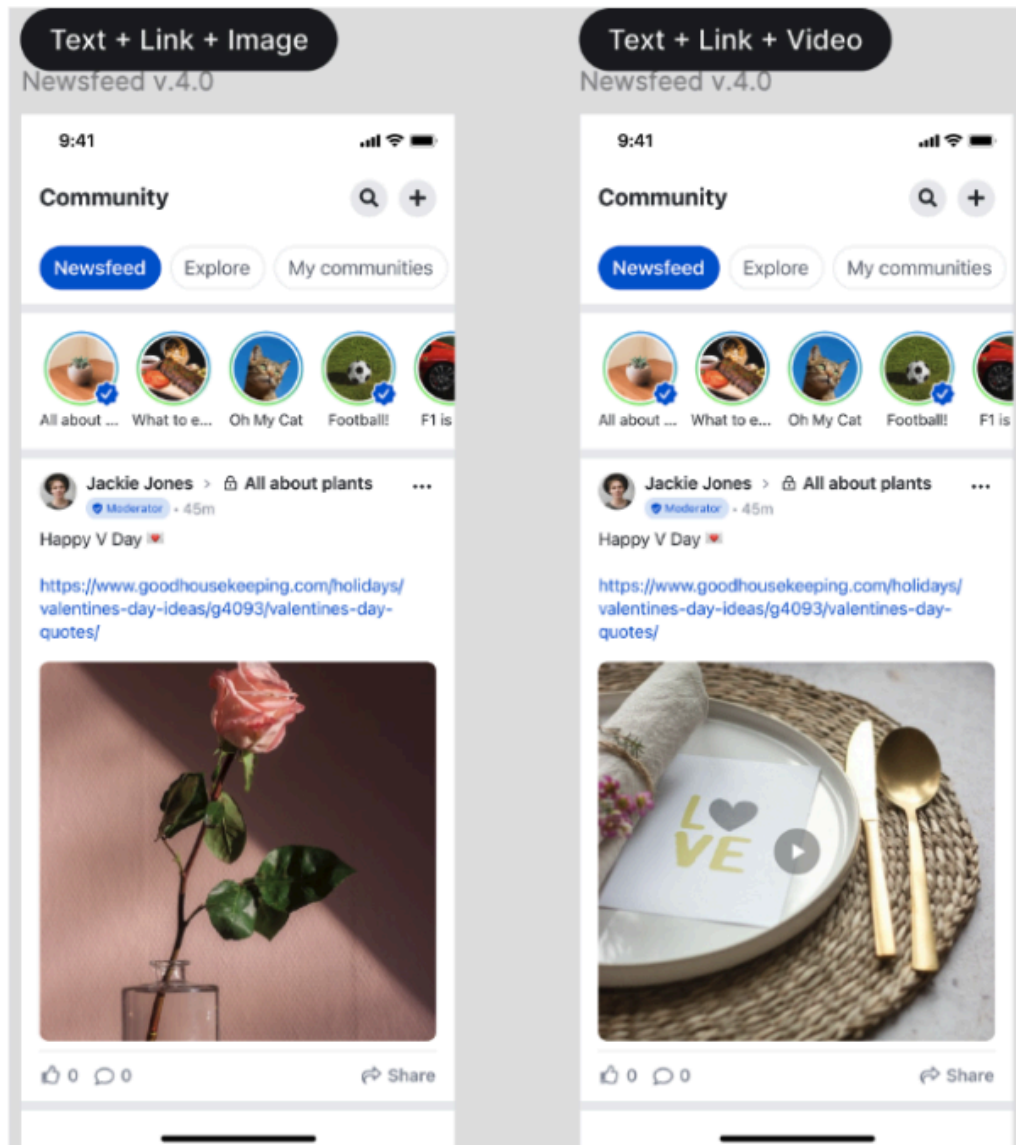

- **This is the link** changed to **These are the links**. In the preview link, the text changed into different text.

(reference to some examples on the internet)

- All images have missing short description contradicting to the requirement (feature) which said “The system fetches the link’s metadata and displays:
 - **Title**
 - **Main image**
 - **Short description**”

- The example only shows the image and video but not including title and description.

2. Improvements Suggestions

- Add a **loading indicator** for preview while fetching metadata.
- Add a button to **manually remove the preview** after posting.
- Allow user to **edit the preview metadata** if needed.

3. Edge Cases Not Covered

- Posting a link with **no image** or a **corrupt image**.
 - Posting a **very long link** that might break layout.
 - Posting a **link in a comment** (not just a post).
-
